SUMP TANK CLEANING

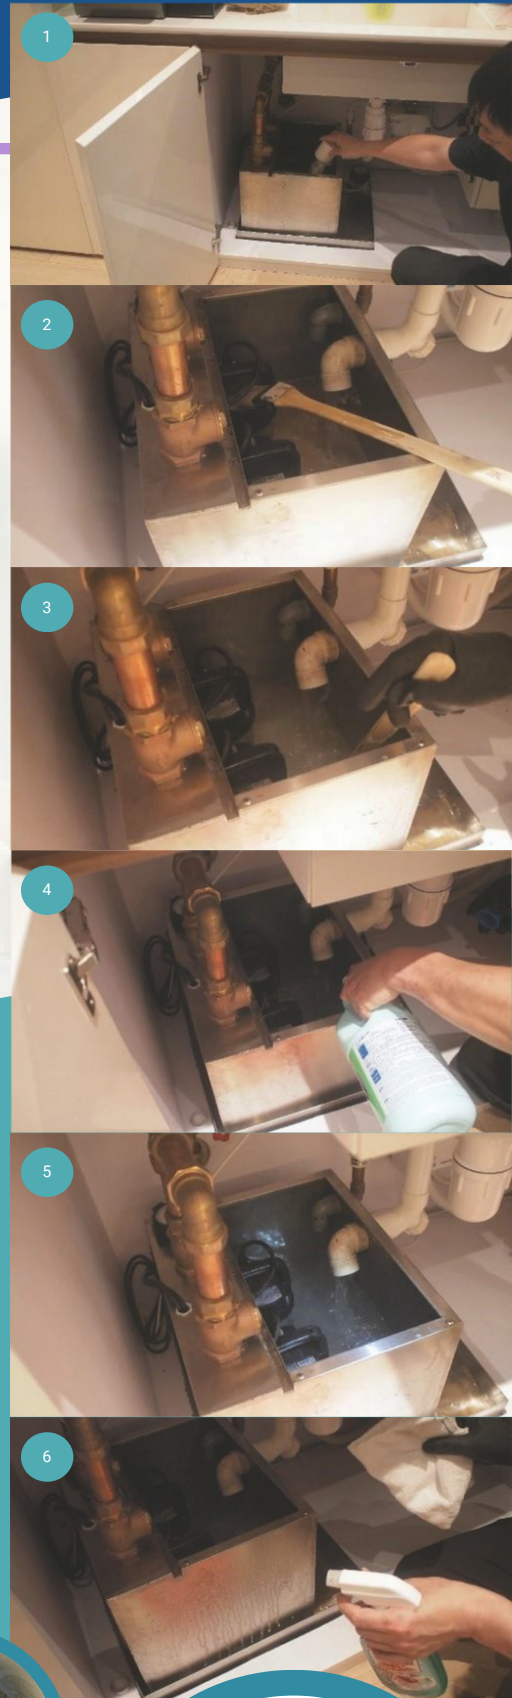

Usually, the sump tank is under the sink in the pantry in the office to prevent food residues or large solid waste from flowing directly into the sewer pipes. Solid deposits and oil greasy materials accumulate on the inside of the sump tank and sewer pipes. Over time, a strong and unpleasant smell may induce by bacteria growth. Thus, it is a must to clean it regularly to ensure the sump tank operates and prevent the accumulation of grease in the kitchen drainpipe, the growth of bacteria, and the transmission of a peculiar smell.

Price: \$550 up/ sump tank
